POWER PLATFORM & COPILOT CONSULTANT

PROFESSIONAL SUMMARY

Microsoft Power Platform and Copilot Consultant with 9+ years of experience architecting low-code and AI-driven solutions across the Microsoft 365 ecosystem. Specializes in Copilot Studio agents, Power Apps, Power Automate, Dataverse, Dynamics 365, and OutSystems, with deep expertise in ALM, Power Platform Pipelines, Center of Excellence governance, and tenant-level DLP through Power Platform Admin Center and Microsoft Purview. Combines hands-on engineering with strategic advisory to deliver secure, compliant, audit-ready solutions for enterprise clients and C-suite stakeholders.

CORE COMPETENCIES

Copilot Studio Agents & Agentic Workflows | Power Apps (Canvas, Model-Driven, Custom Pages) | Power Automate | Power BI (DAX, Power Query) | Dataverse Design & Administration | Power Pages | SharePoint Online | Dynamics 365 | OutSystems (ODC) | Azure Logic Apps | Custom Connectors & APIs | Microsoft 365 Integration

ALM & Power Platform Pipelines | Center of Excellence (CoE) Starter Kit | DLP & Microsoft Purview Governance | Azure DevOps CI/CD & Git Source Control | Security & Compliance

PROFESSIONAL EXPERIENCE

Power Platform & Copilot Studio Consultant

Jan 2026 – Present

Independent Consultant, Confidential Enterprise Client (Remote)

- Designed and deployed multiple enterprise grade Copilot Studio chatbots and agentic workflows, integrating knowledge sources, custom actions, and Power Automate connectors to automate high volume business processes and deliver conversational self-service to internal stakeholders.
- Established Application Lifecycle Management (ALM) best practices across the enterprise tenant for both Power Platform and OutSystems (ODC) workloads, standardizing solution layering, environment strategy, managed solution deployments, and release governance to support scalable, audit ready delivery.
- Configured Power Platform Pipelines to automate solution promotion across Dev, Test, and Production environments, reducing manual deployment effort by an estimated 60% and enforcing consistent quality gates for citizen and pro code developers.
- Deployed and configured the Power CAT Developer Kit to extend the maker experience with advanced diagnostic, monitoring, and low code tooling, enabling faster troubleshooting and higher quality solutions across internal development teams.
- Implemented the Microsoft Center of Excellence (CoE) Starter Kit to provide tenant wide visibility, inventory, and governance over Power Platform assets across the organization, equipping admin teams with dashboards and automated housekeeping flows for maker oversight.
- Authored and enforced Data Loss Prevention (DLP) policies at the tenant level through the Power Platform Admin Center and Microsoft Purview, classifying connectors and restricting data

flows to protect sensitive information and maintain regulatory compliance across all environments.

- Configured Azure DevOps CI/CD pipelines and integrated Git source control with the Power Platform to enable version control, pull request reviews, and automated deployments for multiple high visibility projects reporting into the C-suite, improving traceability and delivery transparency.
- Partnered with cross-functional security, platform, and business stakeholders to embed AI automation into core operations, positioning Copilot Studio and Power Platform as strategic capabilities for executive reporting and enterprise wide productivity improvements.

Power Platform Consultant

Sep 2025 – Jan 2026

City National Bank (an RBC company), Remote

- Assumed full ownership of the ACT application, a critical enterprise tool supporting the bank's Government, Risk, and Compliance (GRC) operations to maintain regulatory compliance with federal banking standards.
- Optimized application workflows and data processing logic using Power Automate and Dataverse, improving processing efficiency and data accuracy for regulatory reporting.
- Implemented automated compliance checks and approval workflows, reducing review cycles and enabling faster response to regulation changes.
- Redesigned the ServiceWriter application interface using canvas apps, streamlined data flows with Dataverse relationships, and integrated Power BI dashboards for stakeholder visibility into regulation management.
- Maintained system stability through ongoing debugging, patching, and feature enhancements while managing version control and CI/CD pipelines via Azure DevOps.
- Collaborated with GRC analysts, compliance officers, and IT teams to gather requirements and deliver solutions that improved user adoption and reduced support requests.
- Created comprehensive documentation and conducted training sessions to facilitate end-user onboarding and system adoption.

Senior Power Platform Developer

Jan 2023 – July 2025

WSECU, Seattle, WA (Remote)

- Architected and delivered multiple canvas and model driven applications integrated with SharePoint Online, Dynamics 365, and Dataverse to streamline member services across the organization, reducing manual processing time by over 40% and supporting 500+ internal users.
- Designed and automated complex loan approval workflows using Power Automate and Azure Logic Apps with multi-stage conditional routing based on risk assessment and member history, reducing approval cycle time by 30% and improving compliance audit trail accuracy.
- Built executive Power BI dashboards with DAX and Power Query that aggregated data from SQL databases, Dataverse, and SharePoint to provide senior leadership with real-time operational insights across member services, loan portfolios, and branch performance metrics.
- Architected secure Dataverse environments across Dev, Test, and Production with custom tables, complex relationships, calculated columns, and business rules to support multiple mission critical applications, maintaining strict separation of duties and role based security.
- Created custom connectors to integrate multiple third party financial services APIs, enabling real time credit scoring, fraud detection, and automated document generation, reducing manual verification time by over 50% and improving member experience.

- Led training workshops and developed comprehensive user guides for 100+ end users, reducing support ticket volume by 40% and improving system adoption and proficiency across business units.
- Established and maintained source control using Git and implemented Agile methodologies with Azure DevOps for sprint planning, release management, and automated deployments across multiple environments, ensuring consistent quality and delivery cadence.

Power Platform Developer

Jan 2019 – Dec 2022

The Boeing Company, Seattle, WA

- Delivered over 20 SharePoint Online solutions including custom lists, libraries, forms, and workflows that improved cross departmental collaboration and productivity.
- Built model driven apps integrated with SharePoint and Dynamics 365 for engineering change request management, reducing approval times and improving audit trail accuracy.
- Developed mobile friendly canvas apps for safety incident reporting with photo uploads, GPS tagging, and automated routing to safety managers based on severity.
- Automated inventory tracking workflows using Power Automate to sync data between legacy systems and Dataverse, including automatic reorder triggers and real time dashboard updates.
- Created Power BI executive dashboards combining data from SQL databases, SharePoint lists, and Dynamics 365, utilizing DAX for complex calculations and Power Query for data transformation.
- Designed secure Power Pages portals for external contractors and partners with role-based access controls and compliance with data security policies.
- Integrated Azure API Management and custom connectors to connect Power Apps with external ERP systems and third party services.

SharePoint & Power Apps Developer

Sep 2016 – Dec 2018

AT&T, Bothell, WA

- Automated employee onboarding processes with SharePoint Online portals and Power Automate workflows for approvals, notifications, and IT provisioning.
- Developed IT service desk applications using Power Apps integrated with ServiceNow via Azure API Management for ticket submission and tracking.
- Built custom SharePoint Framework (SPFx) web parts using React, TypeScript, and JavaScript for document libraries, event calendars, and employee directories.
- Led SharePoint migrations from on premises (2016, 2019) to SharePoint Online using ShareGate, preserving site structures, permissions, and metadata.
- Developed custom connectors to integrate ERP systems, CRM platforms, and third-party APIs with Power Apps and SharePoint.
- Provided technical documentation and end-user training to support adoption of new systems and reduce onboarding time.

EDUCATION

Bachelor of Science in Computer Science

Addis Ababa University, Addis Ababa, Ethiopia

July 2016

CERTIFICATIONS

Microsoft Certified: Power Platform Developer Associate (PL-400) | Microsoft Certified: Power Platform Functional Consultant Associate (PL-200) | Microsoft Certified: Azure AI Engineer Associate (AI-102) | In Progress

TECHNICAL SKILLS

Power Platform: Power Apps (Canvas, Model-Driven, Custom Pages), Power Automate, Power BI (DAX, Power Query), Copilot Studio & Agentic Workflows, Power Pages, Dataverse Administration, Power Fx, Power Platform Pipelines, ALM, Center of Excellence (CoE) Starter Kit, DLP & Microsoft Purview

SharePoint: SharePoint Online, SharePoint Designer, SharePoint Framework (SPFx), Microsoft Teams Integration, Workflow Automation, Office 365 Administration

Development: JavaScript, TypeScript, React, Node.js, HTML, CSS, RESTful APIs, JSON, XML, SQL

Tools & Platforms: Visual Studio, Azure DevOps, Git, Azure Logic Apps, Azure Functions, Azure API Management, ServiceNow, Jira, OutSystems (ODC)

Databases: SQL Server, PostgreSQL, SQL Server Reporting Services (SSRS), Dataverse, MongoDB
